UTILITY SETTINGS

In Utility Settings, you can configure the global Reverb Level, 3-Band EQ and Pad trigger parameters. Press the [UTILITY] button to enter the Utility Menu, then press the [PAGE] button to cycle through the different sub-menu parameter pages.

DETAILED PARAMETERS AND THEIR RANGES:

SUB-MENU	DISPLAY	RANGE	DESCRIPTION
Reverb		0-4	To set up the global reverb level.
EQ High		1-9	To set up the global High-band EQ level.
EQ Middle		1-9	To set up the global Mid-band EQ level.
EQ Low		1-9	To set up the global Low-band EQ level.
Pad X-Talk		0-15	This setting helps prevent "crosstalk" - a phenomenon where striking one pad causes an adjacent pad to produce sound unintentionally. For example, hitting the snare may also trigger sound from Tom 1. In such cases, you can gradually increase the X-talk value for Tom 1 to reduce this effect. Adjustable value from 0 to 15. Note: 1. If the X-talk value is set too high, when two pads are played simultaneously, the one struck with less force may not produce sound. 2. If the current page is for the Hi-Hat Pedal or Kick Pedal, the LED display will show "t00".
Pad Gain		0-31	Pad Gain adjusts the pad's sensitivity. A higher setting makes the pad sound louder, even with a soft hit. A lower setting makes it sound quieter, even with a hard hit. Adjustable values 0 to 31.
Pad Threshold		0-31	Sets the minimum trigger level for the pads. A pad will only produce sound when the signal is above this threshold. This helps prevent unwanted sounds, like crosstalk. If the value is set too high, soft hits may not trigger any sound. Adjustable values 0 to 31.

Note: 1. These settings will be saved automatically when you turn off the power: utility settings, master volume, the number/volume/pad LED setting of the current song, volume/sound setting of the click.

2. Hold [UTILITY] + [SAVE] buttons and turn on the power, the utility settings, song number and master volume will be reset to the default settings.
