

## One Control | Iguana Tail Loop

Thank you for your purchase of the Iguana Tail Loop by One Control.

The Iguana is a five-channel loop switcher equipped with five DC outputs. The loops are all true bypass and it also has a separate tuner output. Perfect for pedals or tuners that seem to sucking out your tone while not in use. Takes a standard 9V power supply and can be used passively if so desired, however power outputs will not be active.

At One Control we continuously strive to improve our products, feel free to contact us with any suggestions or comments!

To get the full potential of the unit and to avoid misuse, please read this user guide carefully.

- 1 2 3 4 5** These switches select which effect is in use. Each switch has a status LED above it letting you know which effect is
- 6 Tuner Switch** When this switch is engaged the output is muted and the tuner output becomes active.
- 7 9V IN** Please use a center negative power supply with over 200mA.
- 8 Input** This is the input for your instrument cable.
- 9 Tuner** Connect your tuner pedal to this output. Simply hit the tune switch to use this output.
- 10 9V OUT** These jacks can power your 9V effect pedals
- 11 Send 1-3** These are the send jacks for loops 1 through 3. These outputs should be connected to the inputs on your effect units. When a loop is turned off the output from the corresponding send jack is muted.
- 12 Return 1-3** These are the return jacks for loops 1 through 3. The outputs from your effect units should be connected to these inputs.
- 13 Output** This is a typical output that should be connected to your amplifier.

## Connections

## Specifications

INPUT: 9 Volt center negative

POWER: 15mA

OUTPUTS: 5 X 9 Volt DC out

DIMENSIONS: 334x65x55 mm – 13.15x2.56x2.17 Inch

WEIGHT: 540g – 19oz.

## Warranty

Repairs or exchanges under warranty are subject to these warranty guidelines:
