

## One Control | Micro-Distro

## Thank you for your purchase of the Distro by One Control.

Up until now there has never been a power supply like the Distro. This is a new category of power supply. Throughout the world there is no power supply like it. You won't be able to find anything like it because its a completely original idea. You can't express what the Distro can do in one sentence. You can power most 9 volt effect pedals with-out individual adapters and furthermore produce almost unwanted heat. With the SAG knob you can vary the voltage from 12-18 volts. other companies don't even come close. Because its a high capacity adapter, two units can be linked together using the DistroLINK powering up to 17 effect pedals.

To get the full potential of the unit and to avoid misuse, please read this user guide carefully.

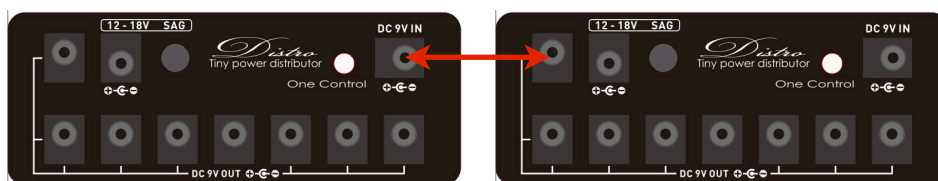

Please check all connections before use. Using any power supply outside of the given limits will not be covered by warranty in case breakage occurs.

When using the SAG DC OUT, disconnect the power supply before adjusting the sag knob.

The SAG DC OUT can power pedals ranging from 12-18 Volt DC. Prior to using it please Check all connections to the pedals.

When using this product always make sure the cables are properly connected. Equipment can be damaged by voltage differences. Using equipment that is outside the voltage specifications is not covered by the warranty.

### Using the DistroLINK

### Specifications

MAXIMUM INPUT: 2A

INPUT: 9 Volt center negative

OUTPUTS: 9: 8 X 9 Volt — 1 x SAG 12-18 Volt DC out (max. 50mA)(SAG variable capability)

MAXIMUM OUTPUT: Total 1950mA with recommended power supply (One Control EPA-2000)

AUTO SHUTOFF: Output Exceeds 1950mA

DIMENSIONS: 35x48x98 mm — 1.38x1.89x3.85 Inch

WEIGHT: 127g — 4.48oz.

### Warranty

Repairs or exchanges under warranty are subject to these warranty guidelines:
