

REPLAYBOX *Delay*

Congratulations

on your purchase of **REPLAY BOX**, a professional true stereo delay from T-Rex Engineering.

Built for players who are serious about stereo, **REPLAY BOX** combines stereo ins and outs, advanced functions like TAP control and the **NOTE DIVIDER**, and the processing power it takes to produce legendary T-Rex tone.

This user manual provides a quick overview of all **REPLAY BOX** functions and controls.

Two delays in one

With **REPLAY BOX**, everything starts with the twin **INs** and **OUTs**, which give you 3 setup options: mono in/mono out (using the left **INPUT** and **OUTPUT** jacks; mono in/stereo out (using the left **INPUT** jack and both **OUTPUTS**); and stereo in/out using all 4 jacks. Running in full stereo, **REPLAY BOX** is really two separate delays in one.

The main controls on your **REPLAY BOX** are as follows. **VOLUME** sets the unit's overall volume output, while

MIX lets you set the balance of your dry and delayed signals. **REPEAT** controls the number of delay repetitions, and **TEMPO** lets you move from a quick slap-back echo to an almost eternal 3-second delay.

Use the **NOTE DIVIDER** switch to choose between a quarter note, a quarter note triplet, and a dotted eighth note delay rhythm.
