

Roland - MOBILE BA

APPLICATIONS

At Schools

The MOBILE BA is a perfect audio accessory for schools. Use it to broadcast educational audio content in a classroom, or to amplify audio-for-video more powerfully and clearly than with TV or computer speakers. In the music lab, dance studio, gym, or anywhere a teacher's voice and music needs to be heard clearly, the MOBILE BA delivers.

School orchestras and marching bands can also take advantage of the MOBILE BA as an amplifier to play back recorded practice sessions. No extra cables, power supplies, speakers, or mixers are required - simply plug in and go. And since the MOBILE BA is ultra-lightweight and durable, even young students can transport it with ease.

In the Office

During meetings, conferences, and presentations, make your point and make your mark. Connect your microphone and laptop to the MOBILE BA, adjust the volumes to suit the room, and your audience will hear you loudly and clearly.

The built-in Anti-Feedback function provides worry-free performance, automatically eliminating unexpected, annoying howling sounds. The simple three-channel mixer provides a volume knob for each channel, letting you easily adjust the balance of your microphone, computer, and any other connected device. For larger rooms, you can mount the MOBILE BA on an optional microphone stand for elevated placement and enhanced projection.

Sing-Along Sessions, Lessons, and More

The MOBILE BA is ideal for singers connect a microphone and add lush reverb or echo to your voice. The convenient Centre Cancel feature minimises pre-recorded vocals from your favourite songs for karaoke-type fun; simply plug in an iPod, portable audio device (such as a CD/MP3 player), or computer into the MOBILE BA, activate Centre Cancel and sing along! This is great for “minus-one” type performances as well as for vocal lessons.

For dance studios and gym environments, the MOBILE BA offers a quick and easy way to pump music into any room or workout area. Because it's so small and light, you can easily move it from place to place. And when powered by six AA batteries, you can operate the MOBILE BA without having to locate it near an AC power source, giving you the ultimate in flexibility and mobile convenience.
