RELEASE NOTES
Prime 4, SC5000 and SC5000M v1.4.0

New Features

- Prime 4, SC5000 and SC5000M v1.4.
- Enabled internet connectivity via Wi-Fi and wired connections.
- Integrated TIDAL Hi-Fi music streaming service.
- Added ability to preview tracks directly from the track list (SC5000/M).
- Added ability to increase track list view allowing more information to be shown on the screen at once (PRIME 4).
- Added ability to manually adjust loop in and out points via platter control.
- Added ability to recalibrate platter touch sensitivity (PRIME 4).
- Added ability to set crossfade time for Zone Out playlist (PRIME 4).
- Added progress bar for Zone Out current playing track (PRIME 4).

Other Enhancements & Improvements:

- Improved quantized triggering to be more forgiving. Hot cues and loops that are triggered slightly late will now trigger immediately and maintain phase.
- Improved search speed for high volume, drive based, search results.
- Forward and backward platter nudge sensitivity is now matched.
- Quantize state is now saved on shutdown and recalled on power up.
- Instant Double is now possible from paused state.
- Rekordbox import on players now imports new playlists in the correct order.
- Fixed an issue where tracks with a metatag BPM outside the range of 30-250 would result extreme BPM ranges.
- Fixed an issue where searching for the file name of a track would result in incorrect results returned.
- Fixed an issue where certain 320kbps AAC tracks would playback with audio artefacts.

- Fixed a vulnerability that could crash system in a rare circumstance.
- Fixed an issue, where in rare cases, a deck's track skip button would stop working.
- Fixed an issue where a mouse cursor would appear when a combo USB keyboard/trackpad was connected. Mice are not supported.
- Switched Layer A/B default colours (SC5000/M).
- Other various bug fixes / improvements.
