YOUR DRUM KIT

Thank you for purchasing the Junior 3 Piece Drum Kit by Gear4music.

To help you assemble this instrument, please read this manual carefully.

Your kit will arrive in a single box and should only take around 20 minutes to assemble. Follow the instructions and you'll be ready to play in no time!

ASSEMBLY INSTRUCTIONS

BASS DRUM ASSEMBLY

1. Lay the bass drum flat, with the cymbal mounting hole facing up.

2. Take the bass drum head with the Gear4music logo on it and place it over the drum.

3. Place one of the hoops over the top of this skin.

4. Insert 6 tension rods through 6 drum claws and insert into the drum lugs. Repeat this process for the other drum skin.

5. Insert the 2x bass drum legs into the holes on either side of the bass drum and tighten.

6. Stand the bass drum up and clamp the bass drum pedal to the drum loop on the blank skin.

TOM DRUM ASSEMBLY

Your tom tom drum will arrive already set up and just needs mounting to your bass drum.

Insert the longest tube of the tom tom arm into the tom mounting hole on the bass drum. If you are right-handed have this drum to the right-hand side, reverse this if you are left-handed.

Unscrew the arm joint, adjusting the angle of the drum so it is comfortable for the user.

Insert the tom tom drum into the tom arm and tighten to secure the drum.

SNARE DRUM ASSEMBLY

Your snare drum will arrive set up.

Get your snare drum stand and spread the legs of the stand. Tighten the screws of the stand so it is sturdy. Sit the snare into the cradle and tighten the wing nut so the stand holds the drum in place.

You can angle and adjust the different parts of the stand so the snare drum sits in a comfortable position for the player.

CRASH CYMBAL ASSEMBLY

Insert the cymbal arm into the cymbal mounting hole on the bass drum. Unscrew the wing nut at the top of the cymbal stand, removing one of the two felts.

Place the crash cymbal on top of the remaining felt, then put the first felt back on top of this. Tighten the wing nut, being careful not to over-tighten the cymbal. You can adjust the angle of the cymbal by loosening the screw on the cymbal arm.

DRUM STOOL ASSEMBLY

The drum stool is assembled by opening the legs on the stand as far as they will go and screwing the padded seat onto the top of the stand. Adjust this to the height of the player.

NOTE - Your drum kit is set up and will need tuning evenly before you play.

The position of the drums and cymbals are personal preference. We suggest setting them up like the picture and adjusting after you begin playing.
