Plasticlicks

Thank you for purchasing **Plasticlicks** - *Drum Sounds Collection*.

This Library requires any type of (software/hardware) sampler, sample player or groovebox that allows to read **Akai S5000 / S6000** (*.akp*) programs, **Sound Font** (*.sf2*) files or just **Wave** (*.wav*) files.

Content of the Library:

- *"Sound fonts.zip"* – **Sound Fonts** SF2 files.

- *"Wave files and Akai programs.zip"* - **Akai S5000 / S6000** programs (.akp) + **Wave** files sampled at *44100 kHz* and *24 bits*. Each Akai program utilizes four different wave files sampled at different velocity each.

Installation guide

Please check sample format compatibility list with your sampler before installing.

To install this Library please follow the instructions provided by developer of software/hardware sampler you use.

Ableton Live users:

Live users who own **Ableton Sampler** may use **Sound Font** (*.sf2*) instead of regular wave files, Sound Fonts allow you to take an advantage of velocity zones.

If you own just a license for **Ableton Live**, use wave files.

Apple Logic users:

- Download the Library and unzip it on the Desktop
- Extract *"Sound fonts.zip"* to *"Library/Application Support/Logic/Sampler Instruments"* folder on your *MacintoshHD*
- After loading **Logic** and inserting **EXS Sampler**, click **Refresh Menu** item in Select Instrument combo on **EXS'** GUI
