NEWSFLASH

HEADRUSH RELEASES 2.4 FEATURE UPDATE FOR PEDALBOARD, GIGBOARD AND MX5 GUITAR FX PROCESSORS

The HeadRush Amp and FX library continues to grow based on popular user requests with 4 new amp models, 2 new overdrive pedals, a fuzz pedal, and a bass preamp

Based on popular requests from the HeadRush user community, HeadRush 2.4 delivers 4 new amp models and four powerful new effects, from classic overdrives to a much-requested bass preamp.

New Amps and FX
Feature Update 2.4 expands HeadRush's amp library with 4 new amp models inspired by the 4 channels of a 2011 ENGL® Powerball II. The 4 models cover bright, dynamic cleans and hefty crunch tones through to brutal metal tones with characteristic attack.

Meanwhile, bassists get treated to the B DIST 7000 model, inspired by the very popular Darkglass® Microtubes B7K Ultra V2 Bass Preamp. Rounding out the FX additions are a classic fuzz pedal and two new overdrive pedals: Oct Fuzz (inspired by a Dunlop® JH-OC1 Octavio), D250 Drive (inspired by a DOD® Overdrive Preamp 250), and S1 Drive (inspired by a Boss® SD-1 Super Overdrive).

As always, the 2.4 Feature Update is available as a free download from the HeadRush website.

What's New in 2.4?
- 4 new amp models
  - 11 EPB HI-LEAD
  - 11 EPB LO-LEAD
