

CP3V Compressor

Operation Manual

CP3V controls

COMPRESSION	Drives the input level against the threshold increasing amount of compression and saturation
MAKE UP	Output level and saturation boost
ATTACK	Variable attack: 0.01 - 100 ms
RELEASE	Variable release: 10 - 500 ms
RATIO	Ratios: 4:1, 8:1, 12:1 and 20:1

CP3V overview

The CP3V is an audio dynamics compressor plug-in, inspired in part by the classic 1176 analogue compressor. The analogue modelled saturation and compression stages combine to add progressively more warmth to the compressed signal at higher levels, while never sounding harsh.

Together with the ultra fast attack and release time it offers a wide range of creative compression options that will help your tracks cut through any mix.

System requirements

Windows: Windows 10 64bit

OSX: OS X 10.9+ 64bit Intel and ARM

Formats: VST2, VST3, Audio Unit, AAX

Installation

Download the latest installer from <http://www.mellowmuse.com/CP3V>.

Without a valid license the plugin will run in demo mode, inserting silence in the audio output at random intervals.

Authorize online

On purchase you will be emailed a serial number. With an active network connection in place, load the plugin in your DAW and click the info (i) button in the bottom right hand corner. Enter the email address you used when purchasing and the serial number. The plugin will connect with our server to authorize.

Authorize offline

You can also login and download your license files via our user area at: <http://www.mellowmuse.com/user>. Unzip the downloaded xxx.lic file and place in the following folder:

Windows: /Program Files/Mellowmuse/Licenses

Macintosh: /Library/Application Support/Mellowmuse/Licenses
