

Ideal for converting a conventional audio system into a connected system.

WM Multiroom is a small and extremely versatile network player, ideal for converting a conventional audio system into a connected system. It will allow you to stream your music remotely via WiFi, Airplay 2 or Bluetooth 5.2.

AirPlay 2

The WM Multiroom supports the Apple AirPlay2 wireless transmission protocol, allowing you to not only easily stream your music from an Apple device, but also stream your music to multiple audio devices at once.

Works with your voice assistant

The WM Multiroom is compatible with Amazon Alexa and Apple Siri voice assistants. This means you can easily control your network player via your voice assistant.

Multiroom

The WM Multiroom's built-in multiroom feature allows you to stream your music throughout your home in 3 different modes. If you use an Apple product, you can use Airplay 2 to set up your multiroom system. If you are using an Amazon product, you can use AVS Multiroom technology. Finally, WM Multiroom also provides an application to easily control your multiroom installation from your smartphone.

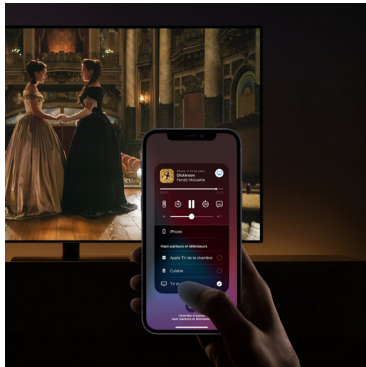

Application Elipson Multiroom

WM Multiroom offers its free Elipson Multiroom mobile app for iOS and Android to easily control all your Elipson devices connected to your network.

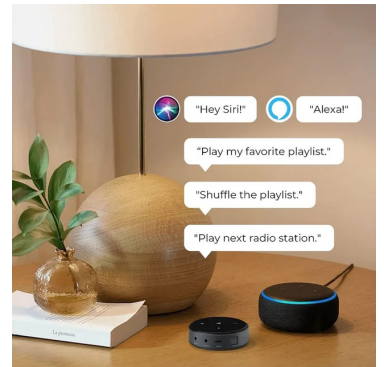

Multiple audio sources

The WM Multiroom is compatible with many streaming services and web radios, such as Spotify, Tidal, Qobuz, Deezer, Amazon Music or TuneIn. You can enjoy your favorite music services and stream them wirelessly to your audio system. And if you want to connect other audio devices to your WM Multiroom, it has an auxiliary input.
